

Navigator Deluxe™

Turn-by-Turn Tool

Navigator Deluxe™ is a full-featured Global Positioning System (GPS)-based navigation tool, which is integrated with supported software applications on the iMAX™ line of mobile computers. Navigator Deluxe™ utilizes the same GPS information used by connected software applications to accurately determine the current vehicle position. When a driver requests navigational assistance to a destination, Navigator Deluxe™ calculates the route between the current location and the destination using advanced navigational algorithms. The route is then highlighted on the map, and turn-by-turn directions are provided to assist the driver in reaching the destination.

■ Optimal Routing

Navigator Deluxe™ can be configured to the fastest or shortest route as needed. It is flexible to provide the most optimal route to save time, reduce cost, drive more efficiently and better serve customers.

■ Ease of Use

Navigator Deluxe™ on the iMAX mobile computer product line is designed for easy operation in a mobile environment. For dispatched jobs, the address is transferred directly from defined application program interfaces (API) into Navigator Deluxe™. For non-dispatched trips, the driver has the ability to enter an address or select optional point of interest to get navigation instructions.

■ Voice Guidance

Turn-by-turn voice guidance allows drivers to concentrate on the road. This enhances both driver and customer safety day and night.

Benefits

- Quick and easy navigation to hard-to-find locations
- State-of-the-art navigation at your fingertips - no more map books
- Integrated with dispatch applications for one-touch operation
- Easy to use searchable address/point of interest database
- Voice guidance allows drivers to focus on the road

Navigator Deluxe™ Features

Navigator Deluxe™'s advanced navigation and superior map-processing technology transform the iMAX™ mobile computers into a top-of-the-line vehicle navigation system with available 7-inches large display of eye-pleasing and high definition resolution graphics surpassing many smaller navigation products. Its expansive flash card data storage allows iMAX™ mobile computers to store as much map data as needed.

■ Routing

- Easy-to-follow turn-by-turn visual and voice prompts guide drivers to destination
- Sophisticated navigation algorithms generate the quickest or the shortest route
- Automatic route recalculation suggests the most updated route when a turn deviates from the original route

■ Visual Features

- Graphically-enhanced and driver-safe day and night time color settings
- 2D or 3D dimensional map views for intuitive and easy orientation

■ Voice Features

- Variety of language choices including English and continental Europe languages
- Multiple and clear reminders precede each maneuver
- Onscreen voice volume adjustment

■ Map Data

- Rich and easy-to-read maps with clearly marked routes
- NAVTEQ™ map data for the highest quality map information
- Latest digital maps display complete street and address coverage in urban and rural areas
- Detailed street maps of North America and continental Europe countries. Other worldwide country maps available

Hardware Requirements

- iMAX™ line of mobile computers
